

## RED BAND WSA400-D/E 9HP DIESEL SITE WOOD SAW - 16"/400MM

---

The WSA400 range of heavy duty wood saws have been designed specifically to provide a reliable, practical and efficient solution to the age old problem of how to cut wood of varying sizes on site and/or in remote locations without access to conventional power sources, making them an ideal hire fleet accompaniment and contractor's tool alike.

Being totally self contained and powered by either a petrol or diesel engine, the WSA400 are not reliant/limited like most conventional/lighter duty wood saws by the availability of an electrical supply, which is not always commonplace, especially on virgin sites.

The WSA400 is robust in construction and are ideal for a wide variety of wood cutting applications, ripping, cross cutting etc.

The WSA400 is supplied with a lengthwise roller extension as standard, and with the addition of the optional side roller extension, can then be used to cut physically larger pieces of wood such as 8" x 4" sheets of ply, often used on site as shuttering.

- Supplied complete with lengthwise roller extension and general purpose TCT blade as standard
- Heavy duty stainless steel, rust free work surface
- Fold away transport wheels to improve manoeuvrability around site
- Winding handle blade guard adjustment
- Built in tool box
- British Made

Maximum Blade Capacity	400mm
Maximum Cutting Depth	110mm
Weight	240kg
